

## Hair Loss

### **"Six Weeks Difference"**

I had a breeder that called me she had a Yorkie returned to her from a buyer, the buyer stated that the Yorkie's hair was falling out and she was not eating. I took the puppy at 6 months old she only weighed 2 lbs 4ozs. She was so sick she had no hair and she could only take a few steps before falling over.

I changed her to a high protein Dog food and started giving her NuVet vitamins. **That was 2 months ago and she has hair and is full of life. She has even gained up to 3 lbs.**

NuVet saved her life, we are breeders of Havanese, Parson Terriers and Silkies. We have every adult dog and puppy on NuVet, it prevents vet visits. We only see our vet for yearly checkups. We cannot say enough good things about NuVet.

## Allergies

### **"Does Not Scratch Anymore"**

I just wanted to thank you from the bottom of my heart for giving my beloved dog his life back. He suffered for so long with severe allergies and we tried every medical treatment on the planet for highly allergic dogs.

Out of desperation, my husband did a lot of research on the internet and luckily stumbled upon your website. We immediately ordered your product and as advertised, it did take about 3 months to really see the effects. My golden retriever, Max, was suffering so badly. He had welts all over his body because he literally bit through his skin to get relief from feeling so "itchy". In addition, he had lost over

30% of his hair. His face looked like he had been in a prize fight due to the constant scratching and his fur was constantly oily to the touch.

**I am so happy to tell you that he has never looked better. His coat has never been healthier and he does not scratch any more.** Max went from being very listless to acting like a puppy again at 7 and 1/2 years of age. You have made a world of difference in his and all of our lives by using NuVet Plus twice a day in his food.

We are so grateful to you and your wonderful product. I have recommended it to other dog owners having similar problems with their pets.

Allergies

### ***"Off of Prednisone"***

Hello. I currently breed, show and train South African Boerboels. I started feeding NuVet, and within days noticed a huge difference in my dogs' appearance as well as their energy levels. I focus on feeding my studs and have noticed increased semen motility as well as count, and healthier, more uniform pups from my breeding females.

I have used NuVet on rescues of all breeds and have seen dramatic changes in them as well. One was a mastiff with severe allergies. She was on Prednisone, topical creams, restricted diet, and on several antibiotics. The poor dog itched constantly and was definitely in poor condition.

After the first week of feeding NuVet, she wasn't scratching nearly as much and inflammation of her feet had decreased. **A month later, she was off the Prednisone and her hair had begun to grow back, no more itching, she was a happier, healthier overall dog!**

I highly recommend NuVet to all my puppy buyers and my families' dogs. It's definitely a product that will remain in my program indefinitely.

## Allergies

### **"Allergies Went Away"**

I have an 18 year old beagle, Reagle Beagle, who has been on NuVet for the last 2 years. Before NuVet, he was on Rimadyl and then Deramax, which seemed to stop working for him.

He could barely get up stairs and was in a lot of pain when he tried to get up. Within a week of being on NuVet (both NuVet and Nujoint) he seemed to revert back to when he was a ten year old dog! He is now able to go up stairs and go for walks, even jumping up and down the curbs!

**Also, his allergies went away!** He used to have itchy skin and ear problems, and they have subsided as well. We have stopped all of the unnatural products and only give him the NuVet and Nujoint along with a healthy diet of chicken and his dry dog food. What an amazing product!

## Allergies

### **"Have not had to go back to the Vet"**

I own a Jack Russell Terrier named Skyler who is now 6 years old. When Skyler was about 18 months old, I discovered she had allergies. I was taking her to the vet almost monthly for prednisone and cortisone injections and giving her Benadryl in between visits. The allergy testing cost so much I couldn't afford it at the time.

Then when she was three years old, I began working in an animal hospital. I could now afford the allergy tests since we could do them at cost not retail! The results came back that she has environmental allergies to the grass in the area (we live in Florida!), to molds, dust, and about everything else outside. She also has food allergies mainly to potatoes and barley (try finding food without either of those two

ingredients!). So my boss suggested we start her on allergy injections. To anyone who has not gone through these, they are not fun...

A year and a half ago in April, I was tired of the injections. I would get her backed down to every two weeks, and then she would break out again. They just weren't working as they should. I now own a grooming salon and was reading about NuVet in one of my grooming magazines. I decided to try it. **Skyler was so much better in only three weeks, it was amazing!!**

**In the year and a half that she has been on Nu Vet Plus, we haven't made one trip to the vet for her allergies.** I don't even have to watch what I feed her. She just doesn't have a problem anymore.

I even have verification that it is indeed the Nu Vet supplements and that she didn't just grow out of her allergies. My son, who is 18, takes care of giving Skyler her "treats" every morning. Unbeknownst to me, he had stopped giving them to her a couple of months ago, because she was getting an upset stomach in the morning. About a month went by without the NuVet and I noticed her abdomen was all broken out and red. She had scratched herself raw in some areas. I asked my son if he was still giving her the "treats" and that's when I found out he had stopped. I told him to start her back on them, only give them at midday instead of in the morning. I kid you not, within four days her stomach had cleared up and she was no longer red and broken out.

I whole-heartedly approve your supplement and tell all of my clients this story. Thank you so much!!

Itching

### ***"Intense Scratching Stopped"***

5 months ago we adopted a 5yr. old dog from a local shelter. The first few days he was with us, we observed major itching, coughing, wheezing, and mucous from his eyes. A full vet wellness exam diagnosed skin allergies. I decided to research some alternative approaches other than allergy testing, steroid medication, and whatnot.

I ordered a 30 day supply of NuVet Plus vitamin supplements. After 2 weeks, the coughing and wheezing stopped completely. **After 5 weeks, the intense scratching stopped. Also, no more eye mucus.**

Our dog is so comfortable now, he is a happy, playful 5 yr. old, unlike the distressed dog he was before! He loves to eat the wafer every morning, he waits by the cupboard for it! This product has been a blessing for "Tazzer".

**Karen Tait, MT**

Skin Allergies

### ***"No longer have problems"***

I consider Barney to be a very important member of my family. He always aims to please and is a wonderful companion. He has suffered from Dry Eye, skin allergies which were moderate to severe and constant ear infections. He was always scratching; I was constantly treating his ears for yeast and putting eye drops in his eyes to keep them lubricated.

I started Barney on NuVet about 2 months ago and he is a changed dog. We no longer have any of the above mentioned problems. **His coat is full and free of hot spots. Itching is no longer a constant battle for him.** His eyes are self lubricating and his ears have been clear and free of infection and smell.

NuVet works!!!!!!!!!!!!!! I am so thankful I tried this product and will keep well stocked with NuVet.

**Oliver Hersloff, FL**

Shedding

### ***"Normally a Skeptic"***

I have to tell you that I am normally a skeptic and would not have guessed that a supplement could do such wonders so quickly for my 7-year-old Boston Terrier

B.B.! We had just added to our family a little red and white Boston Terrier puppy named Bosco, who was on NuVet from the breeder.

She claimed that it would boost his immune system and would give him a great start in life. I agreed to keep Bosco on NuVet for his first year and certainly was going to share with big brother B.B.!Within a week, tired and dull-coated B.B. was bouncing around the house and suddenly had a young and shiny coat of fur. After three weeks, my husband commented that B.B. was no longer shedding! I mean there was NO SHEDDING at all and here it was Spring- the worst time for shedding...

Now if B.B.'s grey in his fur continues to disappear, I will let you know because that will truly mean he is getting younger! Yes...the grey fur (which he has had for several years) is disappearing too! Don't we all want our dogs to stay young? Thank you for a great product.
