

"like he is 2 years old again"

I just wanted to drop you a line about my recent order of the NuVet Plus wafers. My 10+ year old male Australian Cattle Dog (Blue Heeler), named Junior, has been having problems getting up due to what was diagnosed as arthritis. This has been ongoing for the past 4 months. My vet put him on Rimadyl. He would have good days and bad days.

I was reluctant to try your product, but after reading the online literature, I decided to give it a try, since I figured I had nothing to lose.

Well, that was one of my best decisions. **After being on your product for just 8 days, I started to see a big difference. Now after three weeks, he is like he is 2 years old again.** I think I might start taking it myself after seeing his turn around. Thanks for producing this product; you have my business for sure.

"playfulness level has increased 100%"

Zu Zu's Petals is my 11 year old toy poodle and baby. Our groomer recommended NuVet to help with her arthritis. I contacted my veterinarian and he assured me that the ingredients in NuVet would not adversely affect her current prescription medication. The first night after feeding her NuVet, I thought I was seeing what I wanted to see, that she seemed to actually feel better. After three days on NuVet she definitely had more energy. NuVet has helped with her tear production which Poodles are known for. **Zu Zu's Petals' coat is softer and her playfulness level has increased 100% after only one week.** My husband and I thank you NuVet for this wonderful product! We are singing your praises loudly to our family and friends.

"playing hard"

After having my dogs, 2 Standard Show Poodles, 1 Rottweiler and 1 Chesapeake Bay Retriever, on the NuVet Plus vitamins for quite some time and seeing such great improvements in their coats and overall health, I just had to write to you and tell you about the difference I have seen this year in my Rottweiler.

My Rottweiler, Weena, is now 9 years old. **She has hip dysplasia in one hip and by now also developed severe arthritis, especially in the winter time.**

Weena has not been much of a swimmer until Jake, the Chessie, came into our lives. Weena would jump into the water and try to retrieve the dummies, but Jake would swim way out into the deep water and pick up both dummies, sometimes even all 3 and keep them away from Weena. Meanwhile Weena had learned that if she wanted her dummy, she had to swim way out there and be fast. So Weena turned into a "water dog".

Now at age 9, she still had tried to keep up with Jake, jumping in and out of the creek and chasing after him. Meanwhile whenever my husband came back from his daily excursion with both dogs to the water, Weena could hardly walk anymore and for sure by next morning, she was hurting real bad, so that she was limping. I told my husband to leave Weena at home until she was better. I started giving Weena the NuVet "NuJoint Plus" vitamins and could see a little improvement, when she didn't play too hard. **But now since I am giving her 3 tablets every morning, she has been "playing hard" every day and I have not seen her limp all spring and summer.** Weena is a different dog, she even likes to play again with me, chasing her beloved Frisbee and returning it to me.
