

"Absolutely amazing"

After doing some research we purchased NuVet for our 6 year old Australian Cattle Dog. He developed a cataract several months ago. His right eye was swollen, red, irritated and weeping. The lens was very cloudy and it was clear that he was in pain.

After just 2 days on your product we noticed a marked difference! **Now, 1.5 weeks later his eye is open, the redness had diminished and his eye no longer weeps. His eye is also more clear instead of cloudy.** We cannot thank you enough! This product is absolutely amazing!

We had our doubts but you've made believers of us. We've put all of our stock dogs on this product.

"All my kids are going to be taking these for a lifetime!"

Hello Nu-Vet, Our dogs are our children. We have English Springer's and Cocker Spaniels. In the beginning of the spring one of our cockers, Snickers, now 10 started to develop a cataract in his left eye. **He went to the vet and he had given us some eye ointments to alleviate the dryness he had but said he is rapidly losing sight in that eye.**

Never giving up on any of my kids and often turning to holistic practices when the vet says "Nothing can be done" I searched around for some "natural" help for Snickers. I stumbled on your site by accident and figured why not. **In the beginning of September Snickers was not moving his left eye and could see almost nothing out of it.**

I ordered the NuVet supplements and by week 3 of a "double dose" he is now moving the eye and following your hand. He also went and grabbed his ball out of his dish for the first time last week, something he hasn't done for a few months. His sight is definitely improving day by day...These are great! All my kids are going to be taking these for a lifetime! Thank you! And Snickers thanks you!!

"His face shines and and the cataracts from his eyes is slowly disappearing."

I just wanted to let you know that NuVet has worked once again for our new American Eskimo. As I told you before we adopted him from the shelter 6 weeks ago. When we got him we thought he was five but then we found out that he was 14 years old. He had nothing really wrong with him except the fact that he was old. For the first three weeks that we had him he was really calm and slept all the time. **His coat was rough and brittle and he had major cataracts on him eyes.** Well after the 3rd week we started him on NuVet and you should see the change. Let's just say the he only sleeps at night now, his coat feels like cotton and he is just a joy to be around. His face shines and and the cataracts from his eyes is slowly disappearing. I know that because of NuVet our American Eskimo (Prada) will live a long time.

"We kept him on NuVet and his cataracts faded by 50%!"

When I first used Nu-Vet Plus, I tried it on my old rescue Dobie. He had cataracts and it was getting pretty bad, but within a week or two we noticed a difference, not only in his eyes but his coat. **We kept him on Nu-vet and his cataracts faded by 50%!** Later we had to put him on NuJoint for his arthritis, and he started playing with my other dogs again.
